Vedr.: Opfølg på foretæde om den danske holdning til hvalfangst i IWC

I forlængelse af foretrædet i dag har vi hermed fornøjelsen at fremsende Dyrenes Beskyttelses og AIMS undersøgelse om danskernes holdning til hvalfangst.

Vi kan tilføje at miljøministerens svar til miljø- og planlægningsudvalget er bagudrettet og ikke fremadrettet.

Det danske formandskab for IWC har til det kommende årsmøde i IWC stillet forslag om det såkaldte Revised Management Scheme (RMS). RMS er en forvaltningsmodel for kommerciel hvalfangst, som fastlægger betingelserne og regelsættet for, hvordan man kan drive kommerciel hvalfangst. Formålet med RMS er at skabe grundlaget for en kommerciel hvalfangst. Næste skridt er herefter alene at forhandle kvoterne for kommercielle hvalfangst.

Det bemærkes, at RMS slet ikke er omtalt i miljøministerens svar, fordi svaret er bagudrettet.

Med venlig hilsen

Arne Stevns

1. Objectives

Objectives	The objective is to conduct a quantitative survey among the Danish population in order to uncover the positions on whaling.
Target group	The target group is the general population in Denmark aged 15 years or older.
Method	<p>The survey was conducted as a quantitative telephone omnibus survey using CATI (Computer Assisted Telephone Interview) via ACNielsen AIM's Telephone Omnibus from April 4th till 10th of May 2005.</p> <p>Appendix A describes the Methodology and execution of the Telephone Omnibus. The questionnaire is found in an English version in Appendix B, and in a Danish version in Appendix C.</p>

Tabulations

Appendix A: Methodology and execution of the Telephone Omnibus

Sample structure

ACNielsen AIM's Telephone Omnibus (TeleBus) is conducted by means of our in-house CATI equipment (Computer Assisted Telephone Interviewing). The telephone numbers drawn into any given sample are computer generated. This ensures complete randomisation and representativeness as all telephone numbers in use have an equal probability of selection. Commercial telephone numbers are screened out during the interviewing process. The Telephone Omnibus completes 143 interviews per day. As a minimum, a client's questions are to be included on the Telephone Omnibus on three days, which ensures a representative sample of Danish households

Greenland and the Faroe Islands are not included in the sample.

Universe

The universe of the Telephone Omnibus consists of about 4,349,000 individuals aged 15 years and over. The total number of private households in Denmark is about 2,434,000 (as of January 2000).

Stratification

As a result of the simple random selection of telephone numbers, the sample is automatically representative. Stratification is thus not employed.

Selection of respondents

In each household contacted we attempt to conduct one interview. The person selected in any given household is the person aged 15 years or over at the time of the interview whose birthday is the next to come round.

Interviews are conducted Monday through Friday from 4:30 PM until 9:00 PM and Saturdays and Sundays from noon until 5:00 PM. Callbacks are made every other hour to unanswered numbers.

Control

As the generation and selection of telephone numbers and monitoring of callbacks are all computerised, control of the interviews conducted is integrated into the execution of the fieldwork.

Continued next page

Appendix A: Methodology and execution of the Telephone Omnibus, Continued

Weighting

After completion of fieldwork, data are weighted to minimise bias resulting from non-response. Weighting is employed in respect of sex, age, size of household and geographical area, thus restoring the due weights in the universe. When grossing up it is necessary to be aware of the universe and its size.

Details of the unweighted as well as the weighted sample of the survey are given on the opposite page.

Appendix A: Methodology and execution of the Telephone Omnibus, Continued

**How to
calculate the
sampling error**

A representative survey will be subject to discrepancies between the estimates derived from the sample and the true values for the universe of the survey. The causes of discrepancies fall into the following overall categories:

1. Respondents giving answers of poor quality ("response errors")
2. Bias as a result of not all respondents being available for interviewing/agreeing to be interviewed ("non-response")
3. Random discrepancies which are an inescapable consequence of using a sample ("sampling error"). The smaller the sample is, the greater the sampling error will be.

Continued next page

Appendix A: Methodology and execution of the Telephone Omnibus, Continued

95% confidence intervals By means of the table below the sampling error of a percentage can be determined. The confidence intervals in the table have been calculated by means of the following formula, which applies to surveys based on a simple random sample:

$$\pm 1.96 \sqrt{\frac{p(100-p)}{N}}$$

In the formula above, p is the percentage for which the sampling error is to be determined and N is the size of the sample.

The following example illustrates how to use the table on the opposite page: In a survey with a sample of 500 people 35% of the sample have bought Product A within the last month. The percentage of the population as a whole that can be said with 95% certainty to have bought the product within the last month (expressed as an interval around the sample estimate of 35%) is found as follows:

In the first column of the table, choose the row containing the percentage that is closest to the sample estimate (35%). By intersecting this row with the column headed "500" (the sample size) you will see that the confidence interval is ± 4.2 . The percentage of the population as a whole who have bought Product A within the last month is thus 95% certain to lie between 30.8% and 39.2% (35% ± 4.2).

Sample size	100	200	300	400	500	600	700	1,000	1,500	2,000	2,500
Per centage											
5 or 95%	4.3	3.0	2.5	2.1	1.9	1.7	1.6	1.4	1.1	1.0	0.9
10 or 90%	5.9	4.2	3.4	2.9	2.6	2.4	2.2	1.9	1.5	1.3	1.2
15 or 85%	7.0	4.9	4.0	3.5	3.1	2.9	2.7	2.2	1.8	1.6	1.4
20 or 80%	7.8	5.5	4.5	3.9	3.5	3.2	3.0	2.5	2.0	1.8	1.6
25 or 75%	8.5	6.0	4.9	4.2	3.8	3.5	3.2	2.7	2.2	1.9	1.7
30 or 70%	8.9	6.4	5.2	4.5	4.0	3.7	3.4	2.8	2.3	2.0	1.8
35 or 65%	9.3	6.6	5.4	4.7	4.2	3.8	3.5	3.0	2.4	2.1	1.9
40 or 60%	9.6	6.8	5.5	4.8	4.3	3.9	3.6	3.0	2.5	2.2	1.9

Continued next page

Appendix A: Methodology and execution of the Telephone Omnibus, Continued

How to determine whether a difference is significant

The table overleaf can be used to determine whether the difference between two percentages derived from two different samples is significant at the 95% level. The table is based on the following formula:

$$\pm 1.96 \sqrt{\frac{p_1(100-p_1)}{N_1} \pm \frac{p_2(100-p_2)}{N_2}}$$

where p_1 is the estimate derived from the first sample and p_2 the estimate derived from the second sample. N_1 and N_2 are the sizes of the respective samples. In the table overleaf we have simplified the procedure by assuming that $p_1 = p_2$ and $N_1 = N_2$. This will result in minor inaccuracies, which, however, are a necessary element of working with this simplified table.

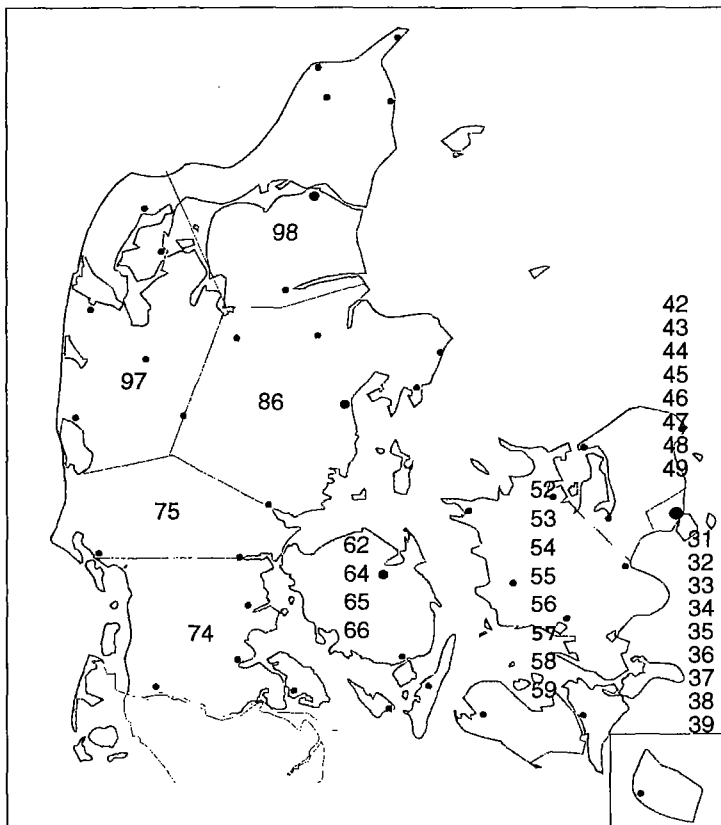

The table is used as follows: In the first column, choose the row containing the percentage that is closest to the two percentages to be compared. If, for instance, the two percentages are 32% and 38%, choose the "35 or 65%" row. Subsequently intersect this row with the column whose heading is closest to the mean of the two sample sizes (500 if the sample sizes are approximately 400 and 600, for instance). If the difference between the two percentages is greater than the figure in the table, the difference is significant at the 95% confidence level. In our example, the figure in the table is 5.9% and the difference between the percentages 6%. The difference is thus 95% certain to be significant.

Sample size Percentage	100	200	250	500	750	1000	1500	2000
1 or 99%	2.8	2.0	1.7	1.2	1.0	0.9	0.7	0.6
5 or 95%	6.0	4.3	3.8	2.7	2.2	1.9	1.6	1.4
10 or 90%	8.3	5.9	5.3	3.7	3.0	2.6	2.2	1.9
15 or 85%	9.9	7.0	6.3	4.4	3.6	3.1	2.6	2.2
20 or 80%	11.1	7.8	7.0	5.0	4.1	3.5	2.9	2.5
25 or 75%	12.0	8.5	7.6	5.4	4.4	3.8	3.1	2.7
30 or 70%	12.7	9.0	8.0	5.7	4.6	4.0	3.3	2.8
35 or 65%	13.2	9.3	8.4	5.9	4.8	4.2	3.4	3.0
40 or 60%	13.6	9.6	8.6	6.1	5.0	4.3	3.5	3.0
45 or 55%	13.8	9.8	8.7	6.2	5.0	4.4	3.6	3.1
50%	13.9	9.8	8.8	6.2	5.1	4.4	3.6	3.1

Area codes

In the tabulations the following geographical descriptions are used for the telephone area codes shown on the map:

Area codes 31 - 39	Copenhagen
Area codes 42 - 49	The counties of Københavns Amt (Copenhagen County), Frederiksborg Amt and Roskilde Amt
Area codes 52 - 59	Remainder of Zealand + Lolland, Falster and Bornholm
Area codes 62 - 66	Funen with islands
Area code 98	Northern Jutland
Area code 97	Northwestern Jutland
Area code 86	Eastern Jutland
Area code 75	Central Jutland
Area code 74	Southern Jutland

Appendix B: Questionnaire – English version

Qu. 1

What is your position on whaling?

(SP)

Interviewer: Read out

1. Strongly opposed
2. Opposed
3. Neutral
4. Support
5. Strongly support
6. Don't know

Qu. 2

The commercial whaling of large whales has been banned since 1986. Denmark is currently working towards lifting this ban in order that commercial whaling can recommence. Do you think that this is acceptable the ban should be lifted?

1. Yes
2. No
3. Don't know

Qu. 3

Despite the existing ban on whaling, Iceland, Japan and Norway are whaling approximately 1400 whales every year. Do you think Denmark should oppose this activity?

1. Yes
2. No
3. Don't know

Qu. 4

Several countries have proposed creating whale reserves in their waters. Do you think that Denmark should support the creation of reserves?

1. Yes
2. No
3. Don't know

Appendix C: Questionnaire – Danish version

Sp. 1

Hvordan er din holdning til fangst af hvaler?

(SP)

Interviewer: Læs op

7. Meget imod det
8. Imod det
9. Neutral
10. Tilhænger af det
11. Meget tilhænger af det
12. Ved ikke

Sp. 2

Siden 1986 har fangst af store hvaler været forbudt. Danmark arbejder nu for ophævelse af dette forbud, således at kommerciel hvalfangst kan genoptages. Mener du at Danmark skal arbejde for ophævelse af hvalfangstforbudet?

4. Ja
5. Nej
6. Ved ikke

Sp. 3

Trods det gældende forbud fanger Island, Japan og Norge årligt omkring 1.400 hvaler. Mener du, at Danmark skal tage afstand fra denne fangst?

4. Ja
5. Nej
6. Ved ikke

Sp. 4

I flere verdensdele foreslås oprettelse af hvalreservater. Mener du, at Danmark skal støtte oprettelsen af sådanne reservater?

4. Ja
5. Nej
6. Ved ikke

Appendix D: Stipulations applying to the performance of market research projects

All market research projects are performed in accordance with the stipulations of the International Code of ICC/E.S.O.M.A.R. which applies to market and social science research. The following excerpts of the rules stipulated by the ICC/E.S.O.M.A.R. Code are essential:

General stipulations

Marked research must always be performed objectively and in accordance with generally accepted scientific principles.

Market research must always be conducted in accordance with national as well as international legislation applying to the countries involved in a given research project.

The rights of the respondents

The respondents' participation in a market research project is completely voluntary at all stages of the project. The respondents must not be misled when invited to participate.

The anonymity of the respondents must be fully observed. In the event that a Respondent has given his permission, at the request of the Researcher, that access to identify him personally is to be provided, it applies that the Respondent must be informed in advance of the identity of the party who will have access to that information and for what purpose. It equally applies that the Researcher must ensure that this information will not be used for any research objective, and that the party who is given this information is under an obligation to observe the stipulations of this Code.

The researcher must take all reasonable measures to ensure that the Respondents will in no way suffer any damage or any kind of inconvenience as a result of their participation in a market research project.

Appendix D: Stipulations applying to the performance of market research projects, Continued

The researcher must show special caution when interviewing children and adolescents. Prior to an interview with minors, the consent of parents or other responsible adults must be secured after these parties have been informed of the objective and nature of the interview.

The Respondents must be informed (normally at the beginning of the interview) of any use of observation technology or recording equipment except in cases where observation or recording is performed in a public place. If so requested by a Respondent, the recording or any relevant excerpt of it must be destroyed or erased. The anonymity of the Respondents must not be violated as a result of the use of the technological methods mentioned above.

The Respondents must be capable of controlling the identity and intentions of the Researcher without difficulty.

Researchers must not knowingly or through negligence exhibit a behaviour which may be detrimental to the reputation of the profession of market research or lead to a loss of confidence of the general public.

Researchers must not make incorrect allegations about their own qualifications and experience or about the qualifications and experience of their organisations. Researchers must not direct unjustified criticism at or speak disparagingly of other Researchers.

Researchers must, at any time, endeavour to plan their work in a satisfactory manner in terms of economy as well as quality and equally perform their work in accordance with the specifications agreed upon with the client. Researchers must ensure that all material in their care is adequately kept and handled.

Researchers must not knowingly allow propagation of conclusions made on the basis of a market research project not adequately supported by data/facts. They must, at all times, be prepared to provide the technical information necessary for an evaluation of the validity of findings published.

Appendix D: Stipulations applying to the performance of market research projects, Continued

Obligations of the researchers

In their professional capacity, the Researchers must not engage in activities other than Research, e.g. data marketing and promotional activities. Activities other than Research activities must always be kept distinctly separated from market research activities in the course of the planning and implementation process.

The mutual rights and obligations of researchers and clients

The rights and obligations in question will normally be subject to a written agreement made by Researcher and Client. The parties may depart from the terms of the stipulations in the instances outlined below provided that a written agreement is made in advance. However, the remaining stipulations of this Code cannot be modified in any similar way. Furthermore, it applies that Market Research must always be performed in accordance with the principles of fair competition in keeping with the way in which these principles are commonly perceived and recognised.

The Researcher must inform the Client of any combination of a given commission of that Client or syndication in a joint project involving other Clients. The Researcher, however, must not disclose the identity of these other Clients.

The Researcher must inform the Client in advance in the event that any part of the assignment commissioned by the Client in question will be performed by sub-contractors outside the Researcher's own organisation (also in the case that external consultants are involved). On inquiry, the Client must be informed of the names of such sub-contractors.

Unless otherwise agreed by the parties, the Client has no exclusive right to the use of the services provided by the Researcher or his organisation, in whole or in part. In his work for various clients, the Researcher must avoid, however, the occurrence of any conflict of interests involving the services which he performs for the Clients in question.

The Material referred to below remains the property of the Client and it must not be disclosed to any third party without the consent of the Client: (a) Draft proposals for a market research project, specifications and other information provided by the Client, (b) Data and findings derived from a market research project (apart from instances where data from a project involving more than one client or a syndicated project are accessible to more than one client).

Appendix D: Stipulations applying to the performance of market research projects, Continued

However, the Client has no right to be given the names and addresses of Respondents, unless the Researcher has secured the explicit permission from these in advance (this particular requirement cannot be dispensed with).

Unless otherwise stipulated in explicit terms in advance, the following types of Material will remain the property of the Researcher:

- Draft proposals for research commissions and quotations (unless the Client has paid for these). The Client must not disclose any such drafts and quotations to a third party apart from consultants working for the Client in connection with the project in question (consultants also engaged in assignments for a competitor of the Researcher, however, are not exempt from this stipulation). It applies in particular that such drafts and quotations must not be used by the Client in an attempt to influence the draft proposals or quotations of other Researchers.
- The contents of a report prepared in a project involving more than one client or a syndicated project in the cases of which it is obviously a precondition that the reports produced are the objects of a wider sale or subscription scheme. Without permission from the Researcher, the Client must not disclose findings from a study of this type to any third party (apart from their own consultants and advisors in connection with their own activities).
- All other Materials produced by the Researcher (for non-syndicated projects with the exception of the report prepared for the Client as well as the plan and questionnaire of the project to the extent that the preparation of these) are covered by the payment of the Client.

The researcher must observe commonly recognised practices with regard to the keeping of Material for a suitable time span after the completion of the project. At the request of the Client, the Researcher must provide the Client with copies of such Material provided that the copies are not contrary to current requirements of anonymity and confidentiality on the condition that a request be made within the time limit for keeping the Material and on the condition that the Client pay reasonable expenses in connection with the obtaining of the Material and also on the condition that the Client pay reasonable expenses in connection with the obtaining of the copies.

Appendix D: Stipulations applying to the performance of market research projects, Continued

The Researcher must not disclose the Client's identity to any third party without the prior consent of the Client (in instances where no Statutory obligation commits the parties involved). This equally applies to any confidential information on the Client's activities.

On demand, the Researcher must give the Client access to carry out checks of the interview work and the data processing on the condition that the Client pay the expenses incurred through such checks.

The Researcher must supply the Client with all reasonable, technical information on every research project completed for the Client in question.

In his reporting of the findings of a market research project, the Researcher must make a clear distinction between the actual research findings and the Researcher's interpretation and recommendations based on these findings.

In instances where findings of a given research project are published by the Client, the latter is responsible that a presentation of these findings is not misleading. The Researcher must be consulted and approve in advance the form and contents of any subsequent presentation of the research project and must actively endeavour to correct any misleading statements on the research project and the findings resulting from it.

Researchers must not allow their names to be used in connection with any research project as a guarantee that the project was completed in accordance with this Code unless they have ensured that the completed project observes the stipulations of the Code in every respect.

Researchers must ensure that their Clients are aware of the existence of this Code and of the necessity of observing its stipulations.
