Sammenfatning

Dette dokument indeholder telestatistik for andet halvår 2007 (perioden 1.juli – 31. december).

Som følge af den hurtige udvikling indenfor telesektoren har IT- og Telestyrelsen siden 1998 udarbejdet halvårlige telestatistikker.

I telestatistikken for andet halvår 2007 kan særligt følgende bemærkes:

> Anvendelsen af den traditionelle fastnettelefon er stadig faldende, både hvad angår antal abonnementer og trafik. Antallet af abonnentlinjer er nu faldet med en million siden første halvår 2002, hvor antallet af abonnentlinier toppede med 3,8 mio.

> Samtidig med at anvendelsen af fastnettelefonen falder, stiger anvendelsen af mobiltelefonen. Antallet af talte minutter i mobiltelefon overgår nu antal af talte minutter i den traditionelle fastnetstelefon.

> Datatrafikken stiger markant. Der er vækst i både tekstbeskeder (SMS) og multimediabeskeder (MMS). Derudover er den rene datatrafik via mobil mere end syvdoblet på et halvt år. Trafikken dækker både mobile indholdstjenester samt mobilt bredbånd.

> Udbredelsen af bredbånd stiger fortsat. Der er nu 36,1 bredbåndsabonnementer pr. 100 danskere.

> Der er nu ved at komme gang i væksten i fiberbredbånd. Antallet af fiberforbindelser er således fordoblet på et halvt år. ADSL er dog fortsat den mest udbredte bredbåndsteknologi. Fiberbredbånd er efter ADSL den bredbåndsteknologi, som står for den største del af bredbåndsvæksten.

> IP-telefoni er i fortsat vækst. Antallet af abonnementer er steget med 35 procent siden andet halvår 2006. Antal af talte minutter er steget med 66 procent i samme periode.

Forord

I forbindelse med udgivelsen af halvårsstatistikken for andet halvår 2007 har IT- og Telestyrelsen af hensyn til konkurrencen på telemarkedet besluttet ikke at offentliggøre markedsandele for udbydere med en markedsandel på under tre procent, med mindre selskabet indgår i et koncernsamarbejde med en andet teleselskab, og deres markedsandel tilsammen udgør eller overstiger tre procent. Dette gælder også de historiske tal. Dette gælder også de historiske markedsandele, hvor selskaber med en markedsandel på under tre procent i andet halvår 2007 offentliggøres, såfremt en eller flere af de historiske markedsandele er tre procent eller derover. Disse selskaber indgår dog ikke særskilt i figurer, der beskriver markedsandele for andet halvår 2007, men fremgår under kategorien ”øvrige”.

I denne publikation gør det sig gældende for følgende fire koncernsamarbejder:

- A+ som omfatter A+ Arrownet A/S, A+ Telecom A/S, Fascom A/S og FastTV A/S.
- TDC som omfatter TDC A/S, Connect Partner A/S, Dansk Kabel TV A/S og Telmore A/S.
- Telia Danmark som omfatter Debitel, DLG Tele, Telia, Telia Stofa.
- Telenor som omfatter Canal Digital, CBB Mobil, Sonofon og Tele 2.

Udbydere med en markedsandel på under tre procent vil i stedet blive samlet i kategorien øvrige. Af listen over udbydere nedenfor fremgår de overordnede ejerforhold.

>

Telestatistikken er blevet til på baggrund af indberetninger fra udbydere af elektroniske kommunikationsnet og -tjenester i Danmark. Telestatistikken omfatter følgende udbydere:

3
A+ Arrownet A/S (ejet af A+)

Østjysk Energi

Udover de listede selskabers indberetninger indgår oplysninger fra andre kilder. Disse oplysninger er pr. 31. december 2007.

Der indgår således oplysninger fra fem uafhængige bolignet. Det drejer sig om Bolignet Århus, Dalgas Have (Frederiksberg), Parknet (København N.), Skydebanen (København V.) og Sprotoften (Nyborg).

Endvidere er der medtaget oplysninger fra følgende to leverandører til uafhængige bolignet: Indienet og Vesterbro ADSL.

Der indgår også oplysninger fra otte fællesantenneanlæg. Det drejer sig om Faaborg Vest Antenneforening, Nordby Antenneforening, G.V.D. Antenneforening (Aalborg), ka-net (Kalundborg), Klarupnet, NAL-NET (Næsby), Tune Kabelnet og Vejen Net.

Endelig indgår der oplysninger fra 91 kollegier.

Telenet og teletjenester kan som udgangspunkt udbydes i Danmark af enhver uden forudgående tilladelse, registrering eller lignende. IT- og Telestyrelsen tager derfor det generelle forbehold, at muligvis ikke alle udbydere af telenet og teletjenester på det danske telemarked indgår i telestatistikken. Især på markedet for udlandstrafik er der de senere år kommet flere udbydere, som ikke er omfattet af statistikken.

Som følge af afrundinger vil summen af tal i tabeller og figurer ikke altid give den viste total.

Signaturforklaring

-	Nul
0	Mindre end 0,5
•	Tal kan efter sagens natur ikke forekomme
**	Ændret i forhold til tidligere offentliggjort pga. nye oplysninger fra udbydere
…	Oplysninger foreligger ikke

Outline

>

This document presents telecommunications statistics for the second half-year of 2007 (1. July. - 31. December).

As a consequence of the rapid development in the telecommunications market the National IT and Telecom Agency (NITA) has produced half-yearly telestatistics since 1998.

The following can be noticed for the Telecom statistics for the second half of 2007:

- *The use of the traditional landline telephony is decreasing. This is evident when observing the declining number of subscriptions (down by one million since the first half of 2002, where it peaked at 3.8 million) and the reduced amount of traffic originating from landline phones.*

- *The use of mobile phones is increasing. Measured in minutes, mobile phones are now used more than the traditional landline phones.*

- *There is a significant increase in the amount of data traffic originating from mobile phones. There is an increase in the use of SMS, MMS and in traffic consisting solely of data. The amount of data traffic for the second half of 2007 is more than seven times larger than that of the first half of 2007. These numbers include both content downloaded directly to a mobile phone as well as traffic generated from mobile broadband modems.*

- *The broadband penetration rate is still rising. At the end of 2007, there were 36.1 broadband connections per 100 inhabitants in Denmark.*

- *The number of fiber broadband connections has also increased. In the past six months the number of fiber connections has doubled. However, ADSL is still the most common broadband technology. Next to ADSL fiber is the technology that covers the largest part of the growth in the broadband sector.*

- *The number of IP telephony subscriptions are is still increasing. The number of subscriptions has increased since second half of 2006. The total number of minutes has increased with 66 percent in the same period.*

In order to ensure and safeguard a fair competition in the market, NITA has decided not to include companies in the statistics with market shares less than three percent – unless a company is a part of a group, where the group holds a total market share of at least three percent. This also concerns the historic market shares, where companies with market shares below three percent in the second half of 2007 are included if one or more of the historic market shares mount to at least three percent. However, these companies are not explicitly included in the figures that describe the market shares for the second half of 2007. Instead, these companies are listed under the category 'others'.

In this publication the following companies are affiliated:

> *A+ which includes A+ Arrrownet A/S, A+ Telecom A/S, Fascom A/S, and FastTV A/S*
> *TDC which includes TDC A/S, Connect Partner A/S , Dansk Kabel TV, and Telmore A/S*
> *Telia Danmark which includes Debitel, DLG Tele, Telia, and Telia Stofa*
> *Telenor which includes Canal Digital, CBB Mobil, Cybercity, Sonofon, and Tele 2*

The data from companies with market shares of less than 3 percent, will be listed under others. The list below shows the overall ownership for providers on the Danish telecommunications market.

Telecommunications statistics are compiled based on reports from providers of electronic communication networks and services in Denmark. The following providers are included in the telecom statistics for the second half-year of 2007:

In addition to the reports from the above mentioned companies data from other sources are also included. These data are as of December 31st 2007.

Data from five independent providers of broadband connections via internal networks for the use of housing associations and student youth accommodations are included: Bolignet Århus, Dalgas Have (Frederiksberg), Parknet (Copenhagen), Skydebanen (Copenhagen) and Sprotoften (Nyborg).

Furthermore, data from two equipment suppliers of broadband connections via internal networks for the use of housing associations are included: Indienet and Vesterbro ADSL.

The telecom statistics also include data from eight independent community network providers of cable modem services: Faaborg Vest Antenneforening, Nordby Antenneforening, G.V.D. Antenneforening (Aalborg), ka-net (Kalundborg), Klarupnet, NAL-NET (Næsby), Tune Kabelnet and Vejen-Net.

Finally, the telecom statistics also include data from 91 student youth accommodations.

Telecommunication networks and services may be provided in Denmark by anyone without obtaining a licence, registration or similar requirements. Consequently, reservation is made to the possibility that not all providers of networks and services operating on the Danish telecom market are included in the statistics. Particularly, several providers have recently been established on the market for outgoing international traffic. Not all of these providers are included in the statistics.

Due to the rounding of numbers in tables and figures, these do not always add up to the total shown.

[1] Kapacitet på mindst 144 kbit/s.
[2] *Minimum capacity of 144 kbit/s.*
[3] Alle former for DSL med kapacitet på mindst 144 kbit/s (Digital Subscriber Line).
All types of DSL with a minimum capacity of 144kbit/s (Digital Subscriber Line).
[4] Wireless Local Loop. Trådløs fastnetadgang, f.eks. som FWA(Fixed Wireless Access).
Wireless Local Loop. e.g. as FWA(Fixed Wireless Access).
[5] Wireless Fidelity. Adgang fra en fast adresse via trådløst net baseret på en af 802.11-standarderne.
Wireless Fidelity. Access via wireless net based on one of the standards in the 802.11 family.
[6] Fra 1. halvår 2005 til 1. halvår 2006 indeholdt dette tal også aktive abonnementer med adgang til flere lokationer (hotspots).
From 1st half-year of 2005 to 1st half-year of 2006 subscriptions with access to several locations (hotspots) were also counted.
[7] Hertil kommer 39.253, der har adgang til flere lokationer (hotspots) og 28.306, der har haft en midlertidig adgang i løbet af halvåret.
Further 39,253 had access to several locations (hotspots) and 28,306 had a temporary access during the half-year.
[8]Hertil kommer 170.500, der har adgang til flere lokationer (hotspots) og 38.559, der har haft en midlertidig adgang i løbet af halvåret
Further 170.500 had access to several locations (hotspots) and 38,559 had a temporary access during the half-year.
[9]Hertil kommer 237.785, der har adgang til flere lokationer (hotspots) og 56.288, der har haft en midlertidig adgang i løbet af halvåret
Further 170.500 had access to several locations (hotspots) and 38,559 had a temporary access during the half-year
[10] Worldwide Interoperability for Microwave Access. Standard for trådløs adgang, som ikke kræver udsyn mellem terminal og basestation.
Worldwide Interoperability for Microwave Access. Standardised wireless access, that does not require line-of-sight between terminal and basestation.
[11] Antal husstande i boligforeninger, kollegier m.v. med abonnement på en bredbåndsadgang via et internt lokalnet. Lokalnettet kan være baseret på PDS-kabling eller et trådløst net (WLAN). Den fælles internetforbindelse, som husstandene deler via et internt lokalnet, kan fx bestå af en optisk fiber, FWA eller xDSL.
Number of households in residential associations, student hostels etc. with broadband subscription via internal network. The network can be based on either PDS cabling or a wireless network (WLAN). The internet connection that the households share via the local network can be fibre optic cable, FWA, xDSL etc.

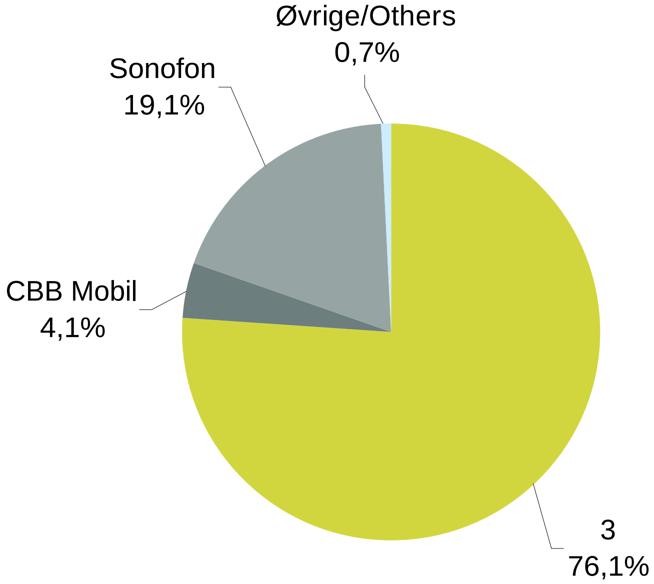
Figur 23. Mobilt bredbånd[1] - abonnementer og markedsandele, 2007
Figure 23. Mobile broadband[2] - subscriptions and market shares, 2007



[1] Mobilt bredbånd defineres som et EDGE, UMTS eller CDMA abonnementer der indenfor de sidste 3 måneder har været anvendt til avancerede datatjenester, forstået som andet end tale, SMS og MMS.
[2] *Mobile Broadband is defined as an EDGE, UMTS, or CDMA subscription which has been used for advanced dataservices (excluding speech, SMS, or MMS) within the last 3 months.*
[3] (2. H. 2007): Nordisk mobiltelefon og Ventelo. Det har ikke været muligt for TDC samt serviceprovidere på TDC's net at indberette data for mobilt bredbånd

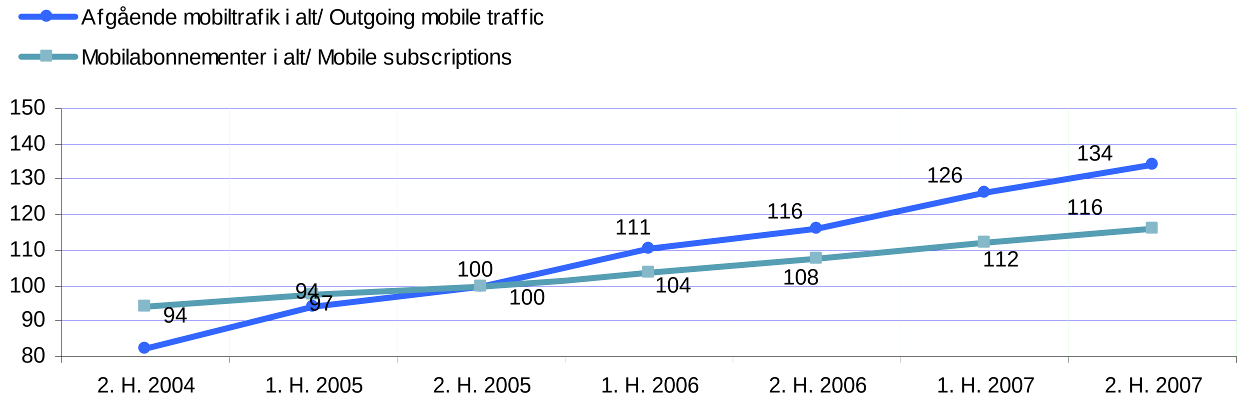
Figur 26. Mobiltelefoni – abonnementer[1] og mobiltrafik, 2005-2007
Figure 26. Mobile telephony – subscriptions[1] and traffic 2005-2007



[1] Omfatter GSM, GPRS og UMTS, men er eksklusiv rene dataabonnementer i form af GPRS-abonnementer. inklusive aktive taletidskort, ultimo perioden. Et taletidskort anses som aktivt, hvis der indenfor de seneste 3 måneder har været ind- eller udgående trafik eller har været foretaget "genopfyldning". Indekseringen er foretaget ud fra hvert halvårs gennemsnitlige antal mobilabonnementer.

[2] *Comprises GSM, GPRS and UMTS subscriptions including active pre-paid cards at the end of each period. Pre-paid card is defined as active if there in the past 3 months has been incoming traffic to or outgoing traffic from the telephone (the pre-paid card) or if it has been reloaded. Indexing is based on average number of mobile subscriptions each half-year.*
