Bemerkung:

Recovery of gypsum waste on potassium waste from salt mines (dumps)

Dear Lone Schou, dear Thilde Fruergaard

after termination of potassium salt mining in Thuringia, salt mining waste (dumps) totalling about 350 hectares remained in this region.

The waste shall be covered with soil and other suitable materials in several layers. This measure was taken in order to green the waste from salt mines (dumps) and to minimise wash-out of salts.

Because there is not enough natural soil (earth) available in order to cover the dumps as a whole, it can be used only for the top layer. Therefore, it is essential to use suitable waste, e.g. gypsum waste of the waste code 17 08 02 (gypsum-based construction materials other than those mentioned in 17 08 01) as material for the lower layers.

2

For this reason the use of gypsum waste of the waste code 17 08 02 for covering waste from salt mines (dumps) is considered as recovery.

After having checked the suitability of the waste, Thüringer Landesbergamt (competent mining authority in Thuringia) grants the permit to recover waste for the purpose of covering the waste from salt mines (dumps).

Yours sincerely

by order

Dorfmann
