<sup>1</sup> Base year: 2016.

<sup>2</sup> Reference: DPCS 2011 as of June 2011.

<sup>3</sup> Contributions two years later than requested: adjusted at 80%.

<sup>4</sup> Weighting system was used to address the relative magnitude of each force contribution.

<sup>5</sup> Only very limited assessment of quality of forces included.

<sup>6</sup> Does not assess readiness discrepancies unless significant.

<sup>7</sup> Measures degree of implementation of force goals (which seek to address qualitative shortfalls of forces) within the required timeframes.

<sup>8</sup> Can only be considered as a very rough measurement of the progress in transforming forces.

<sup>9</sup> Measurement is imprecise, especially for force goals with multiple requirements or for force goals with a very long implementation time.

<sup>10</sup> Weighting factor for each force goal takes into consideration effort and resources over the period of time required to implement it. However, it does not take into consideration that the level of effort to implement a force goal is different from nation to nation.
