

Status for de største sælbestande i Grønland

Af

Aqqalu Rosing-Asvid

Biolog, Senior Forsker, Grønlands Naturinstitut

Der er 6 sælarter i Grønland

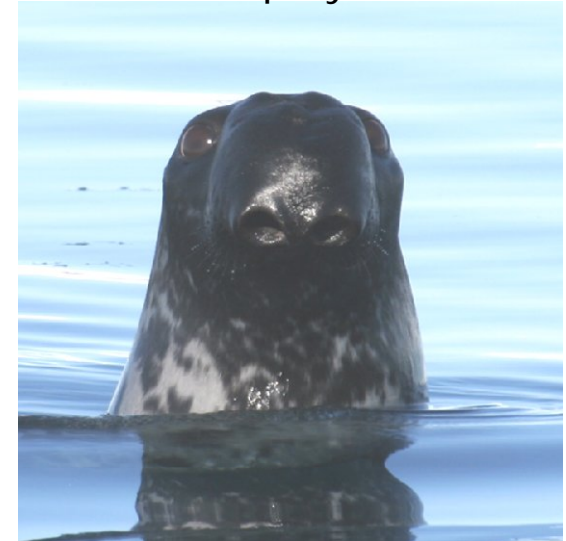

Remmesæl

Grønlandssæl

Klapmyds

Ringsæl

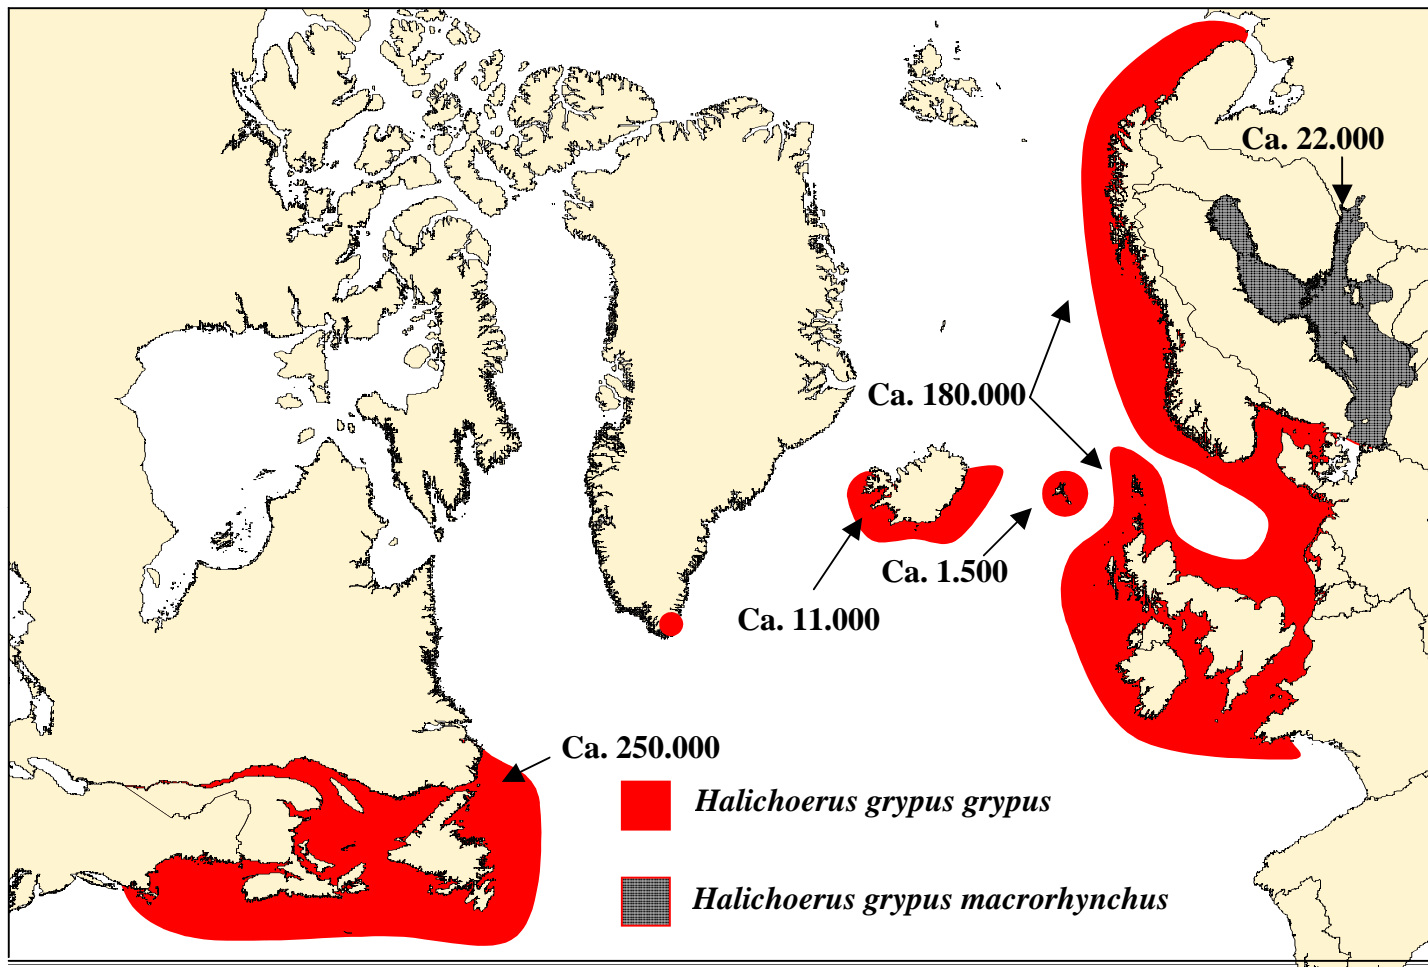

Spættet sæl

Gråsæl

Græsæl udbredelse

Den spættede sæl er fåtallig
og i 2010 blev den og gråsælen
total fredet i Grønland

Klapmyds

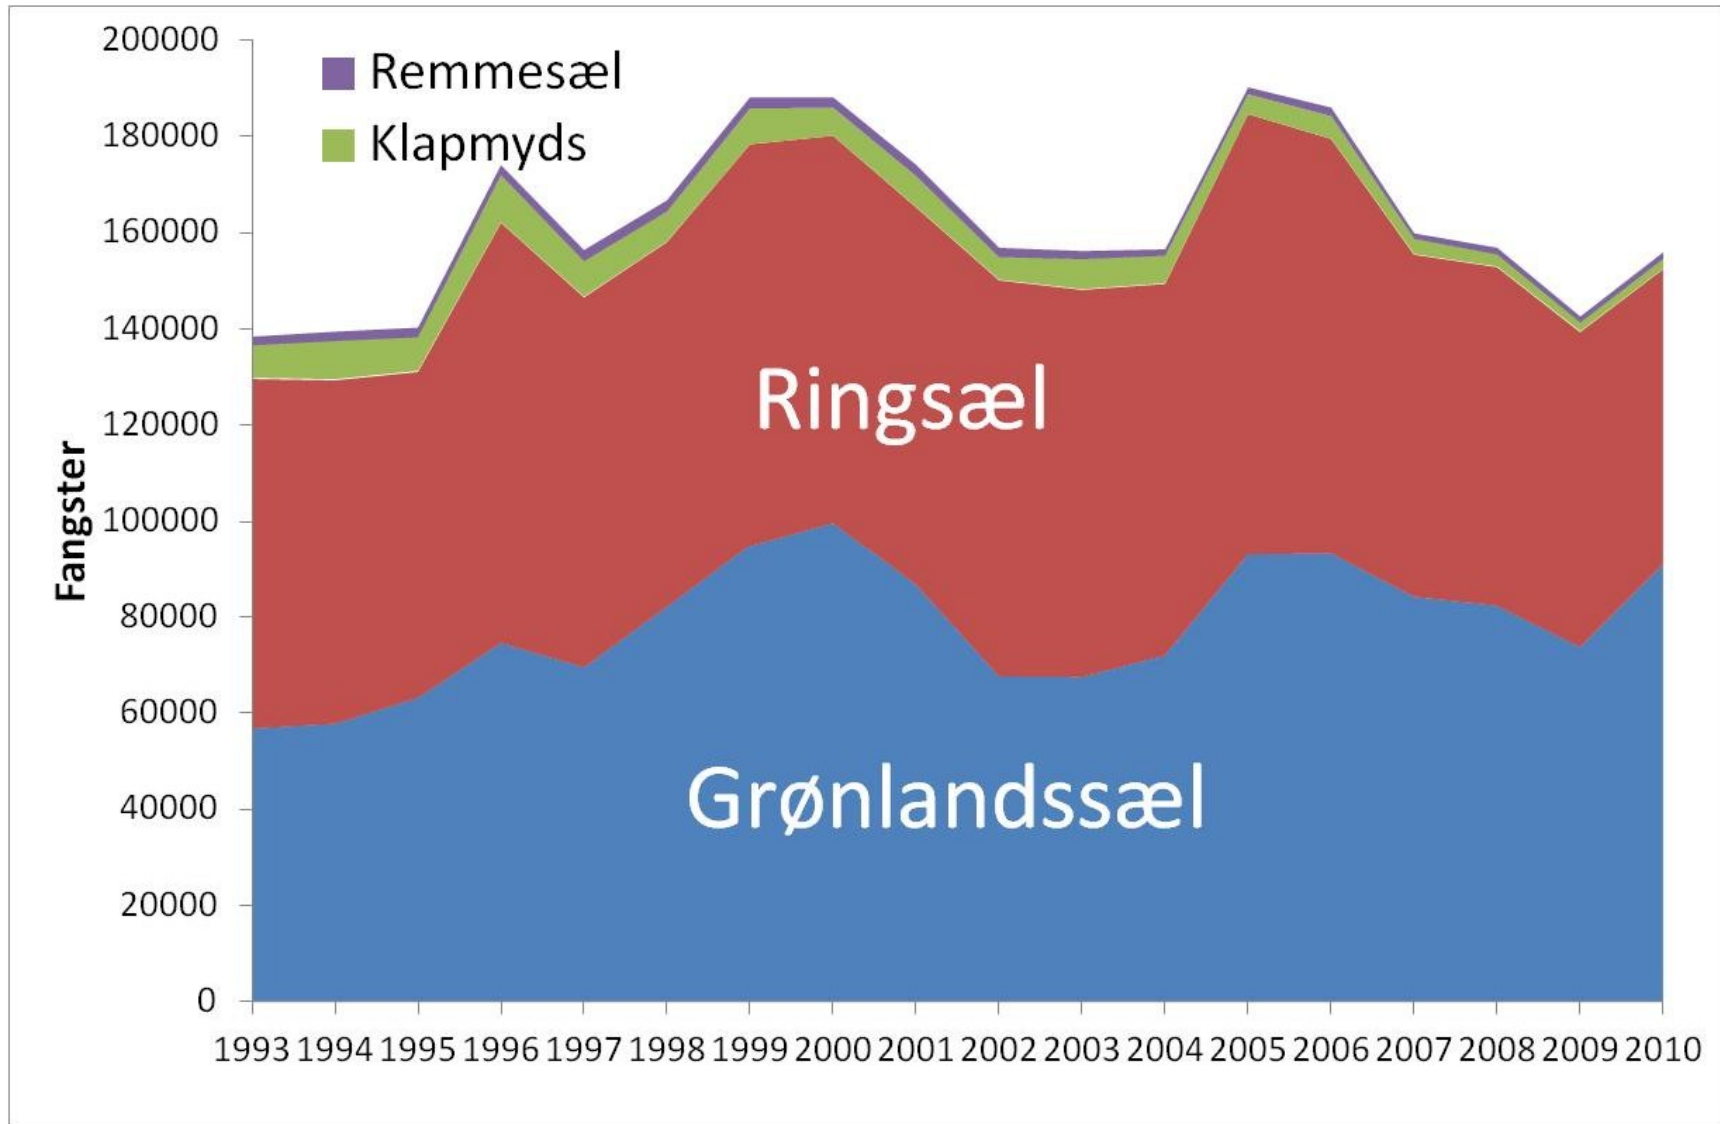

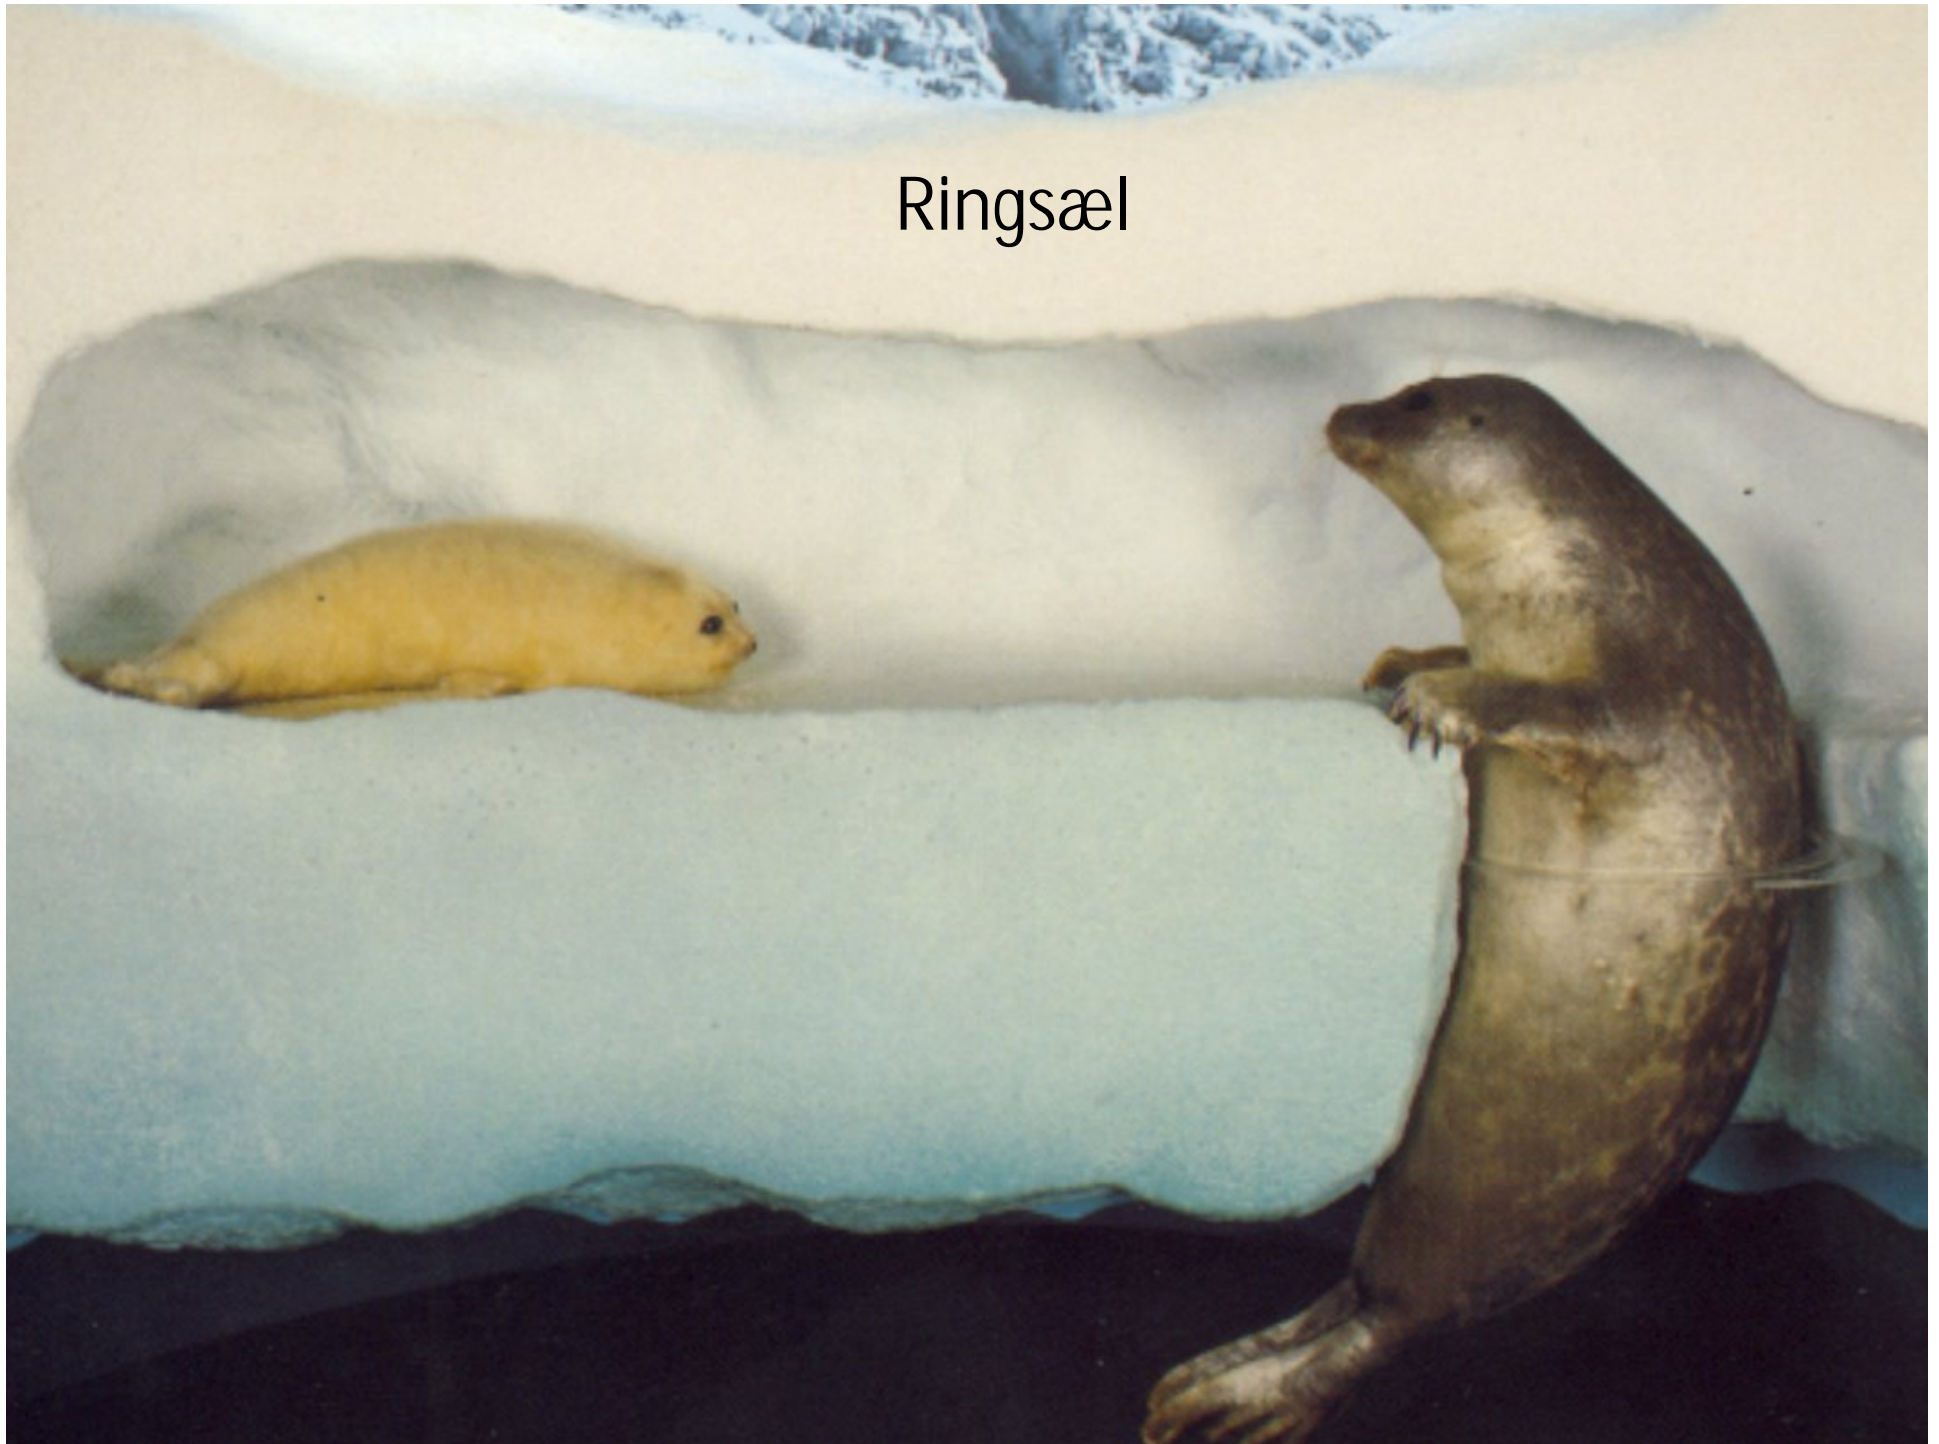

Den kommercielle fangst af klapmyds var rettet imod årsunger (Bluebacks).

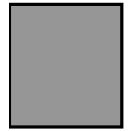

Fangsttal

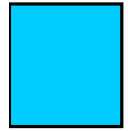

Ringsæl

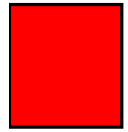

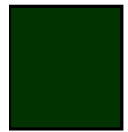

Pusa hispida hispida

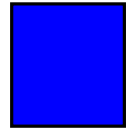

Pusa hispida ochotensis

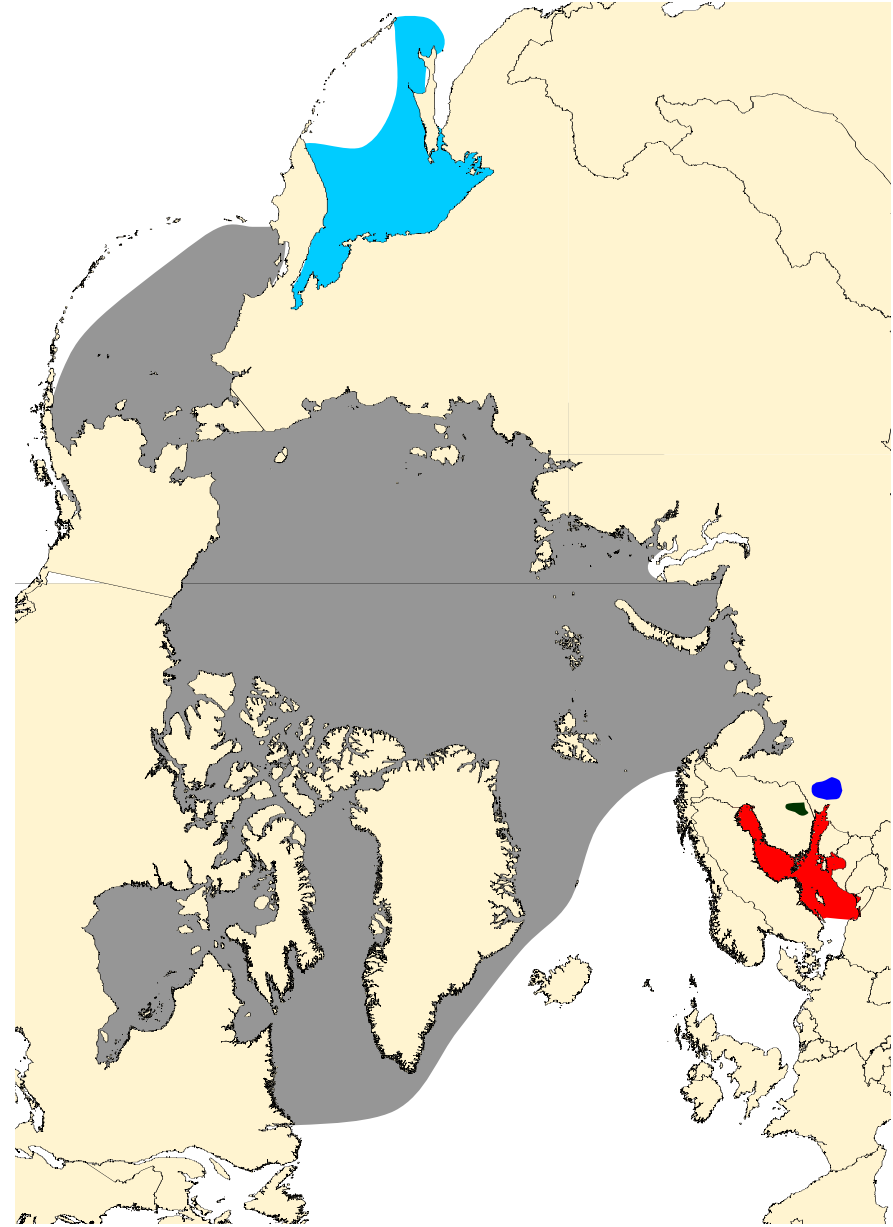

Pusa hispida botnica

Pusa hispida lagodensis

Pusa hispida saimensis

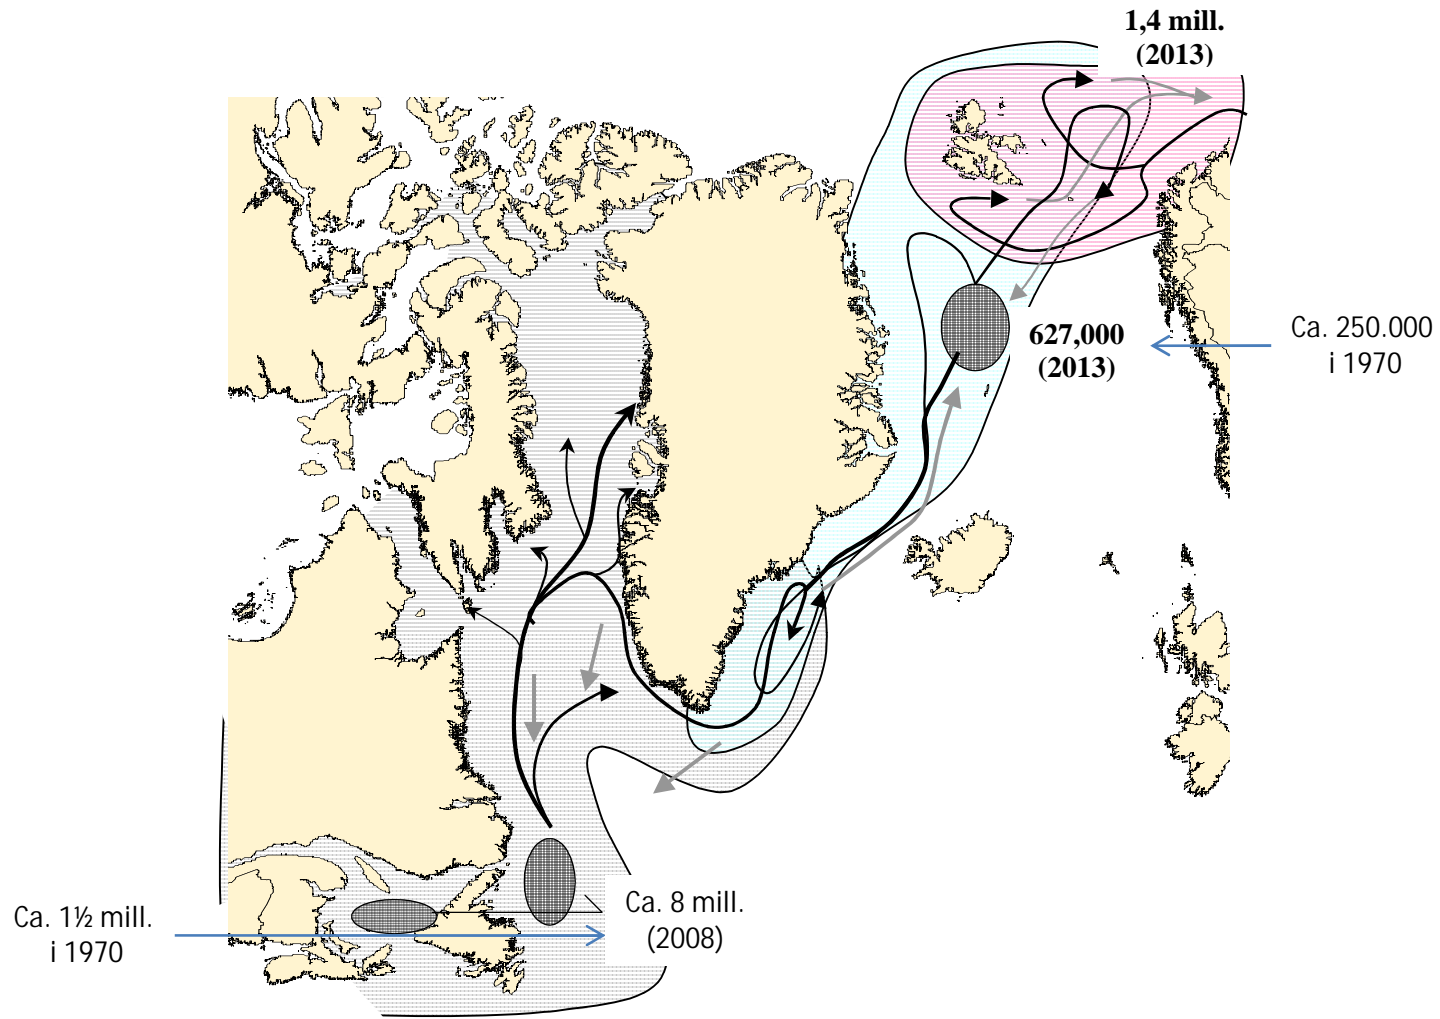

Grønlandssæler

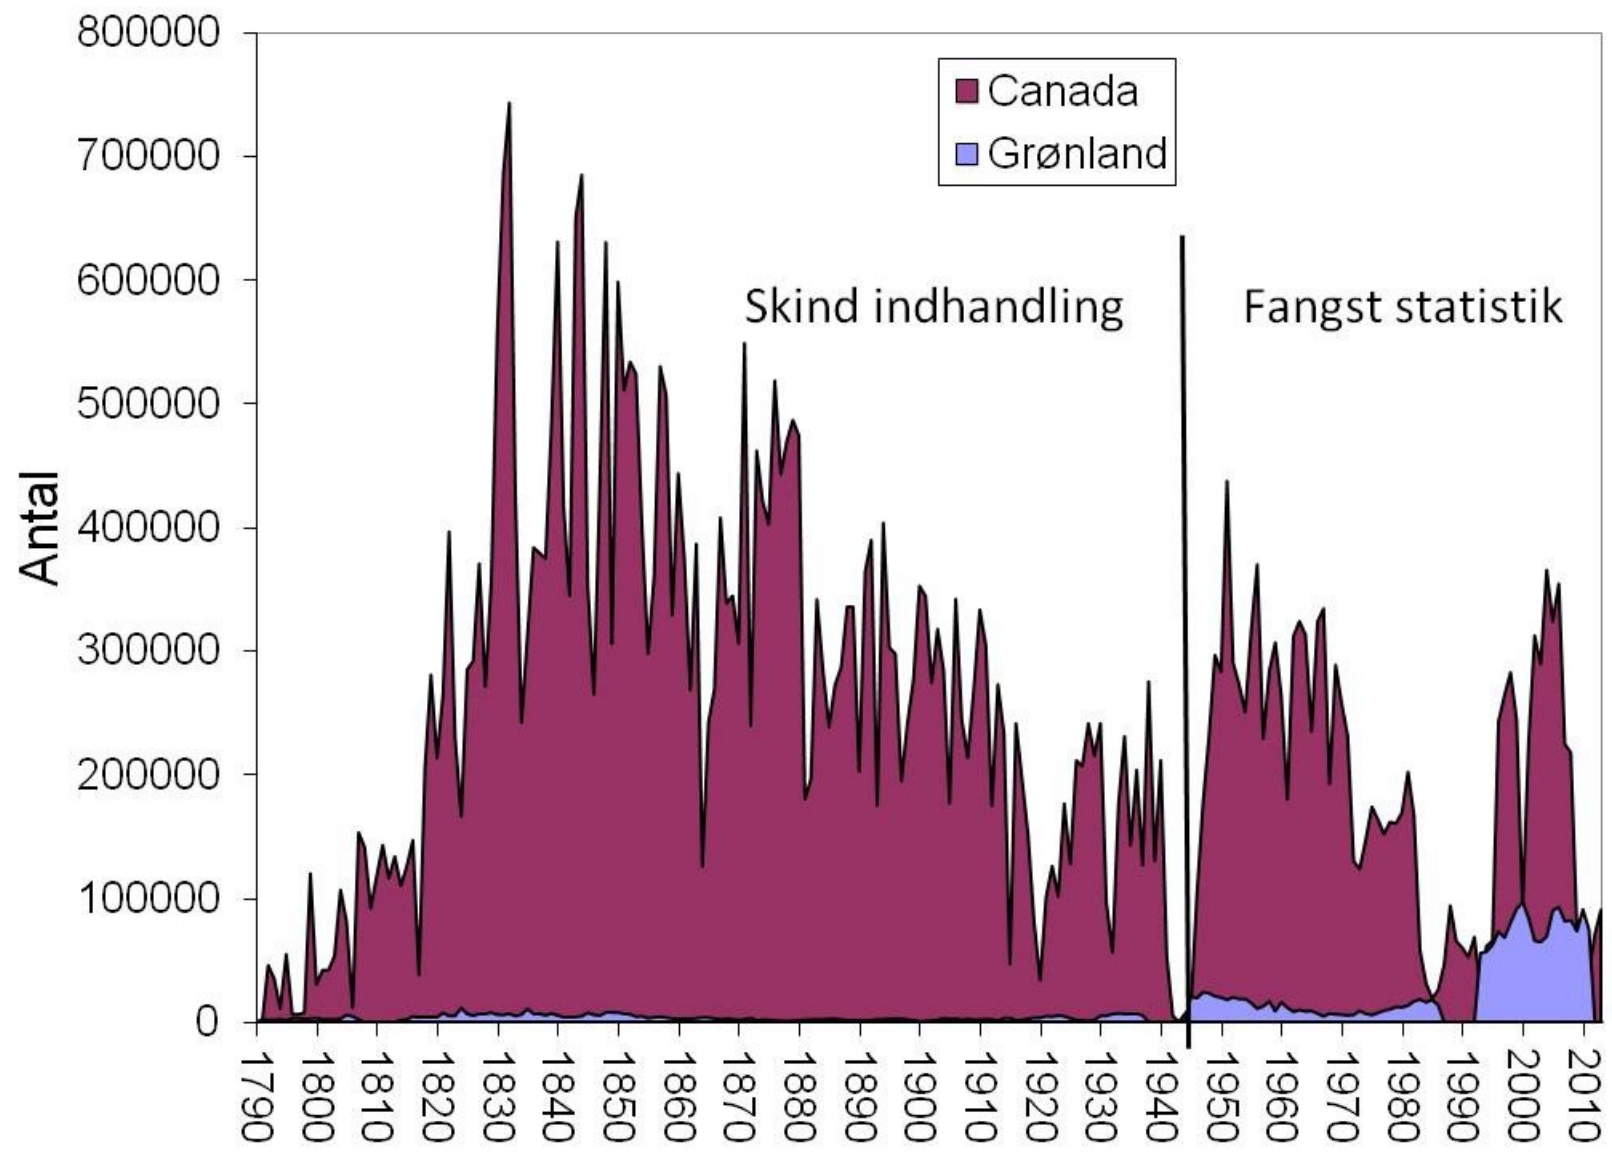

Yngle- og fælde-område (Marts-April)

Forår-sommer

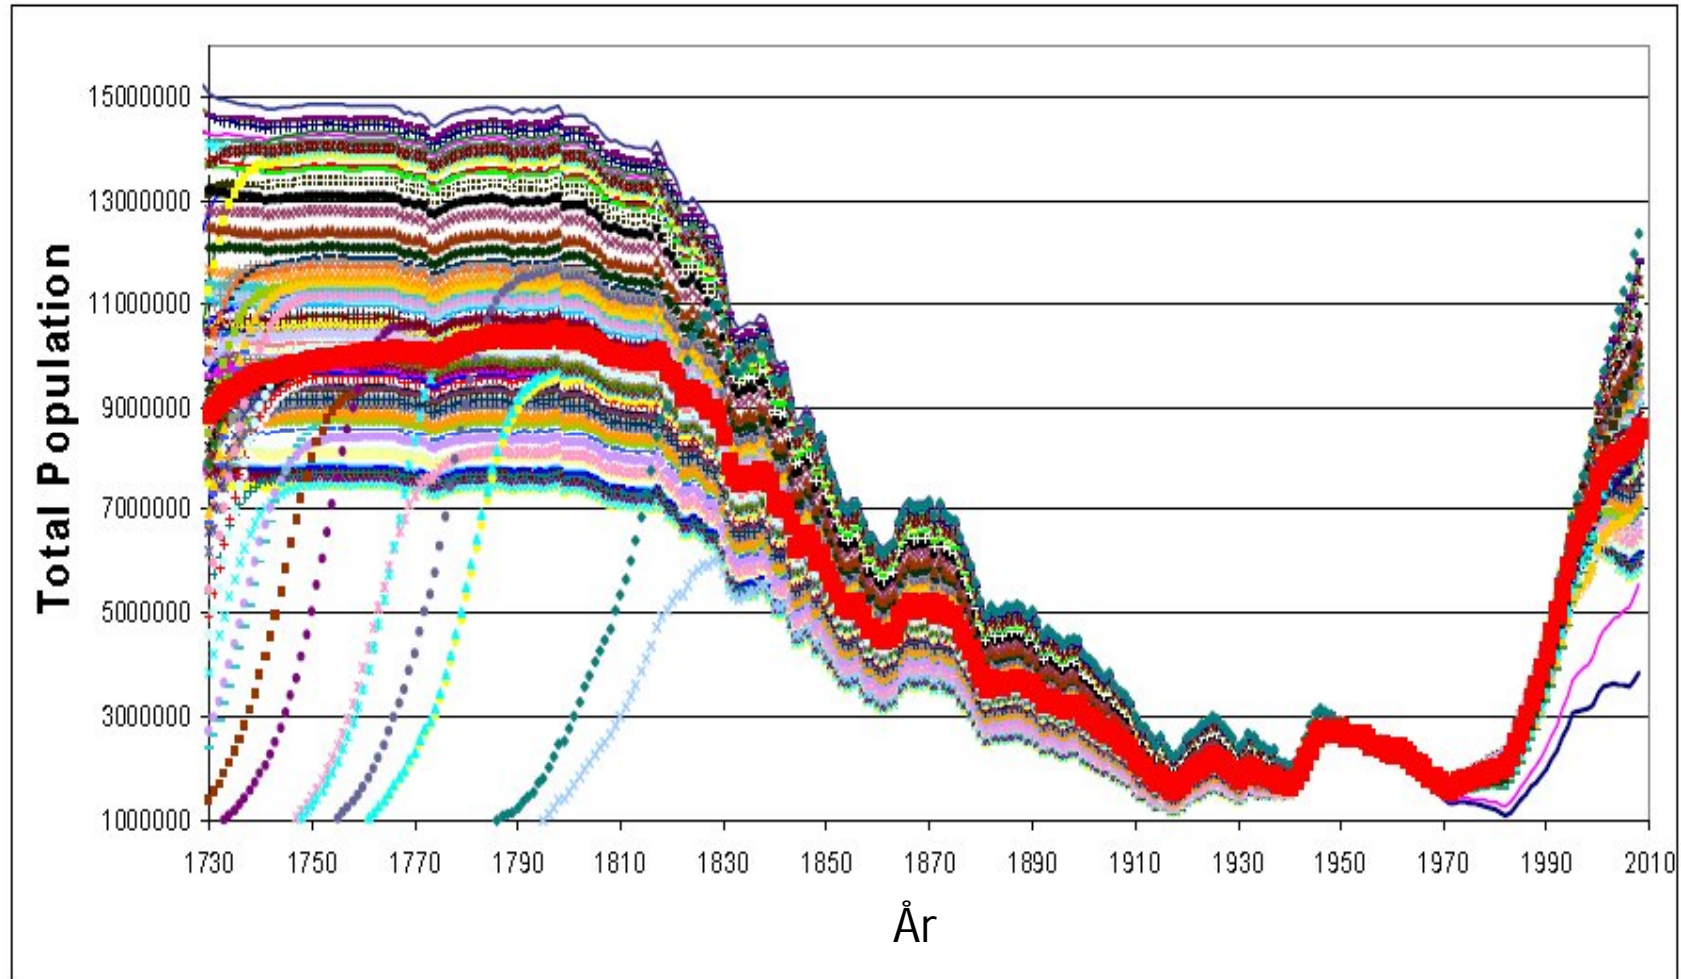

Efterår-vinter

Canadisk kvote i 2011-13 var 400.000 grønlandssæler/år,
Hvilket med den grønlandske fangst på ca. 80.000 skulle
stabiliserer bestanden.

Den Canadiske fangst har dog kun været på 40-90.000/år,
så man formoder at bestanden fortsat er vokset.

Er den grønlandske sælfangst
bæredygtig?

Ja, det tyder den eksisterende viden på.

Mht. grønlandssæler kan fangsten forhøjes
betydeligt, uden at overstige den maximale
bæredygtige fangst.

Tak
