

Request for meeting

In November, we will send Mission to Denmark, in order to observe advanced projects on nursing/welfare, education and so on. And we would like to exchange on the subject with policy making person, such as members of parliament's Association of Welfare.

The purpose of the visit

Declining birthrate and aging population has become a global challenge. Especially in Japan, we reached the super-aging society. Needs for nursing/welfare, education will surely expand. Although medical care, nursing care, education in Japan is progressing in the element technology, in terms of human-friendly welfare that stood in the position of the user, it is progressing Nordic. In Japan, we force the user to change the living environment as long-term care easy. In Northern Europe, you conducted a long-term care that does not change the life style. Although the average life span is long Japanese, age to live with satisfaction towards the Denmark is long. We would like to have hints in order to incorporate friendly care to people in Japan in the field, by visiting the facilities and exchange on the subject with the members of policy making section, such as members of parliament's Association of Welfare. And also, through the visit to the early childhood education facility where they conduct relax education, we would like to exchange opinions on the philosophy of Danish early childhood education. We would like to take advantage of the philosophy to Kawasaki's program.
