

SmartAlert

- Smart Start interlock devices used in drink driver offender programs are available with several optional features, including:
 - **Camera module** – Captures a digital image of the driver coincidentally with every test, retest, missed retest, recorded attempt to tamper, circumvent or bypass the device, as well as other violations
 - **Cellular/GPS modem** – Allows recorded event log data, including GPS coordinates in the case of violations, to be uploaded daily to Smart Start's database server
 - **SmartAlert™** – Provides real time notification of violations via email sent directly to monitoring authorities. Shows date, time of day, participant's name, event data including BrAC (BrAC x 10=Promille) if applicable, GPS coordinates and mapped location. If the device is equipped with Smart Start's camera module, SmartAlert notifications also include a digital image of the driver, captured at the time of the event
