

## Invitation to International seminar on

# Proposed measures to combat eutrophication from farming in the second WFD-cycle

How to launch both surgical and wide spread water quality measures to decrease N and P-leaching from farming is one of the major challenges in achieving good ecological status in the EU Water Framework directive. Most countries are struggling with finding efficient measures, finding ways of involving farmer and means to finance measures without increasing administration and influencing competitiveness of food production. These challenges involves both principal questions such as PPP and practical ones such as methods for inspection and dissemination.

Speakers from ministries and authorities and scientist from UK, Germany, Ireland, Finland and Denmark will present their proposed programme and discuss the ongoing process and considerations related to agriculture.

### *“How is this done in other countries?”*

is a common question among both farmers and experts in water quality management. The seminar offers a unique opportunity to meet and exchange experiences.

**Place:** Stockholm, Sweden

**Date:** 30th September 2015, time 10.00-15.30

Detailed programme and information about location and how to register will be sent later.
