

My agenda

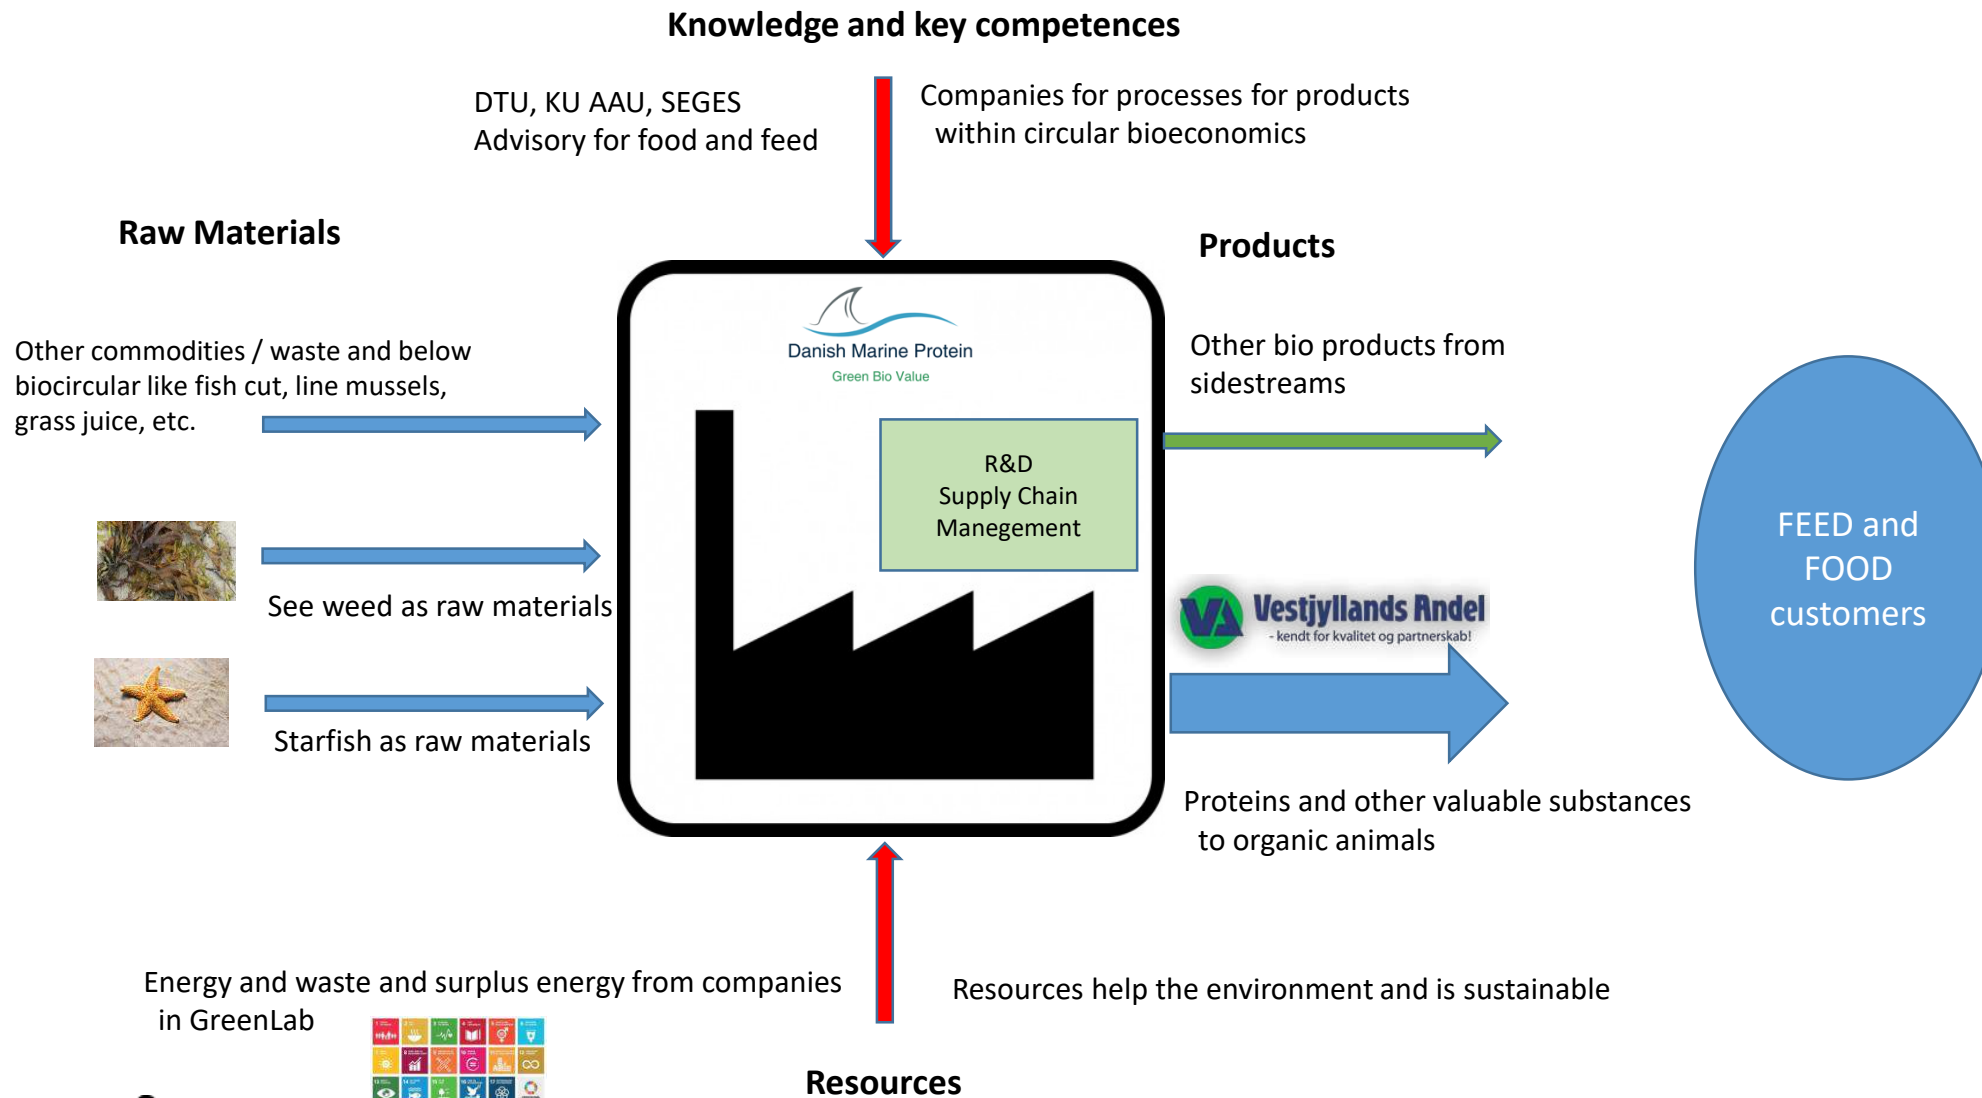

Circular economy as a business where everyone wins

- Prehistory to starfish becomes protein for organic animals
- The four key pillars of bio economy for Danish Marine Protein!
- Opportunities we see in the new business park GreenLab

Prehistory to starfish becomes protein for organic animals

- Mussel fishermen are threatened by harmful starfish in the Limfjord - contacts Agro Korn
- Organic animals lack good high end proteins instead of soybean protein from China
- Danish Marine Protein is established in 2016 and in 2018, Vestjyllands Andel is included as Denmark's largest organic feed producer
- Successful results after trials with new gentle production methods for handling and drying starfish to a highend protein in a business plan for organic animals
- Good results in feed trials with the use of starfish protein meal for chickens and piglets

The four key pillars of bio circular economy for Danish Marine Protein!

Opportunities we see in the new business park GreenLab

- Sustainable energy is the future and essential for making good proteins as well as other products for the feed and food segment - We see this in GreenLab!
- Supports a number of UN's 17 world goals
- Waste energy can be used for the benefit of the environment and economy
